

## Charleston Air Force Base C-17 Support Facilities Squad Ops/AMU Facilities

Charleston AFB, South Carolina

Bell had total construction responsibility for two 33,670-square-foot two-story brick and structural steel office buildings holding administrative offices, briefing rooms and shop/warehouse areas. The project was carried out in two phases to allow quick occupation of the first structure.

Associated site improvements included new paving, landscaping, irrigation, area lighting, roadways and drainage work.

Because of the close proximity of occupied structures during the construction of the second building, close attention to site management was required. Among the additional work was the demolition of four buildings, as well as site demolition of existing parking lots, roadways and utilities.
