

Syracuse Health Science Center

Syracuse, New York

Bell provided general construction services for this new 141,000 square-foot, six-story hospital facility, as well as the renovation of 121,000 square foot of adjacent hospital space.

Excavation activities on this extremely tight site required removal of 68,500 cubic yards of soil and rock with cuts up to 45 feet deep.

Interior space included intensive care, nursing suites, nursing units, kitchen facilities, diagnostic and lab space, as well as administrative space.

Other project features include:

- Installation of 20,000 square feet of shoring with 91 soldier piles.
- Placement of 19,000 cubic yards structural concrete.
- Three 60,000 lb/hr boilers.
