

Tobyhanna Industrial Operations Facility

Tobyhanna, Pennsylvania

The construction of this 90,000-square-foot industrial operations facility included over 8,000 CY of concrete, vinyl ester-coated structural steel, with an exterior shell of split face CMU and EIFS.

The facility's operations include 123 various plating tanks, twelve paint booths, dust collection system, fume scrubber system and an industrial waste water system, all supported by three chillers, several air handling units and a boiler with a fuel oil tank farm.

Bell self performed site work, concrete and mechanical work, including a 60" diameter fiberglass scrubber system for this project.
